

# CHPM2030 - Combined Heat, Power and Metal extraction from ultra-deep ore bodies

# Project data

Call: H2020-LCE-2014-2015 two-stage, Research and Innovation action

Topic: Developing the next generation technologies of renewable electricity and heating/cooling

Project ID: 654100

Implementation: 01.01.2016-30.06.2019

Budget: 4.2 million EUR

TRL: 4-5

# The consortium

Participant organisation name	Country
University of (UNIM), coordinator	Hungary
University of Szeged (USZ)	Hungary
European Federation of Geologists (EFG)	France
Iceland Geosurvey (ISOR)	Iceland
British Geological Survey (BGS)	UK
Laboratório Nacional de Energia e Geologia (LNEG)	Portugal
Vlaamse Instelling voor Technologisch Onderzoek (VITO)	Belgium
La Palma Research S.L. (LPRC)	Spain
Agency for International Minerals Policy (MinPol)	Austria
Geological Survey of Romania (IGR)	Romania
Katholieke Universiteit Leuven (KLeuv)	Belgium
Geological Survey of Sweden (SGU)	Sweden

# Challenge

EU needs clean energy - EGS operating costs are high

EU needs critical raw materials – limited mining

Developing a new technology for combining geothermal energy production and metal mining

Create a proof of concept of the technical and economic feasibility at laboratory scale

# Concept

Identifying ultra deep metalliferous formations

Establishment of EGS

Enhance the interconnected fracture systems within the orebody

Leaching metals from the orebody

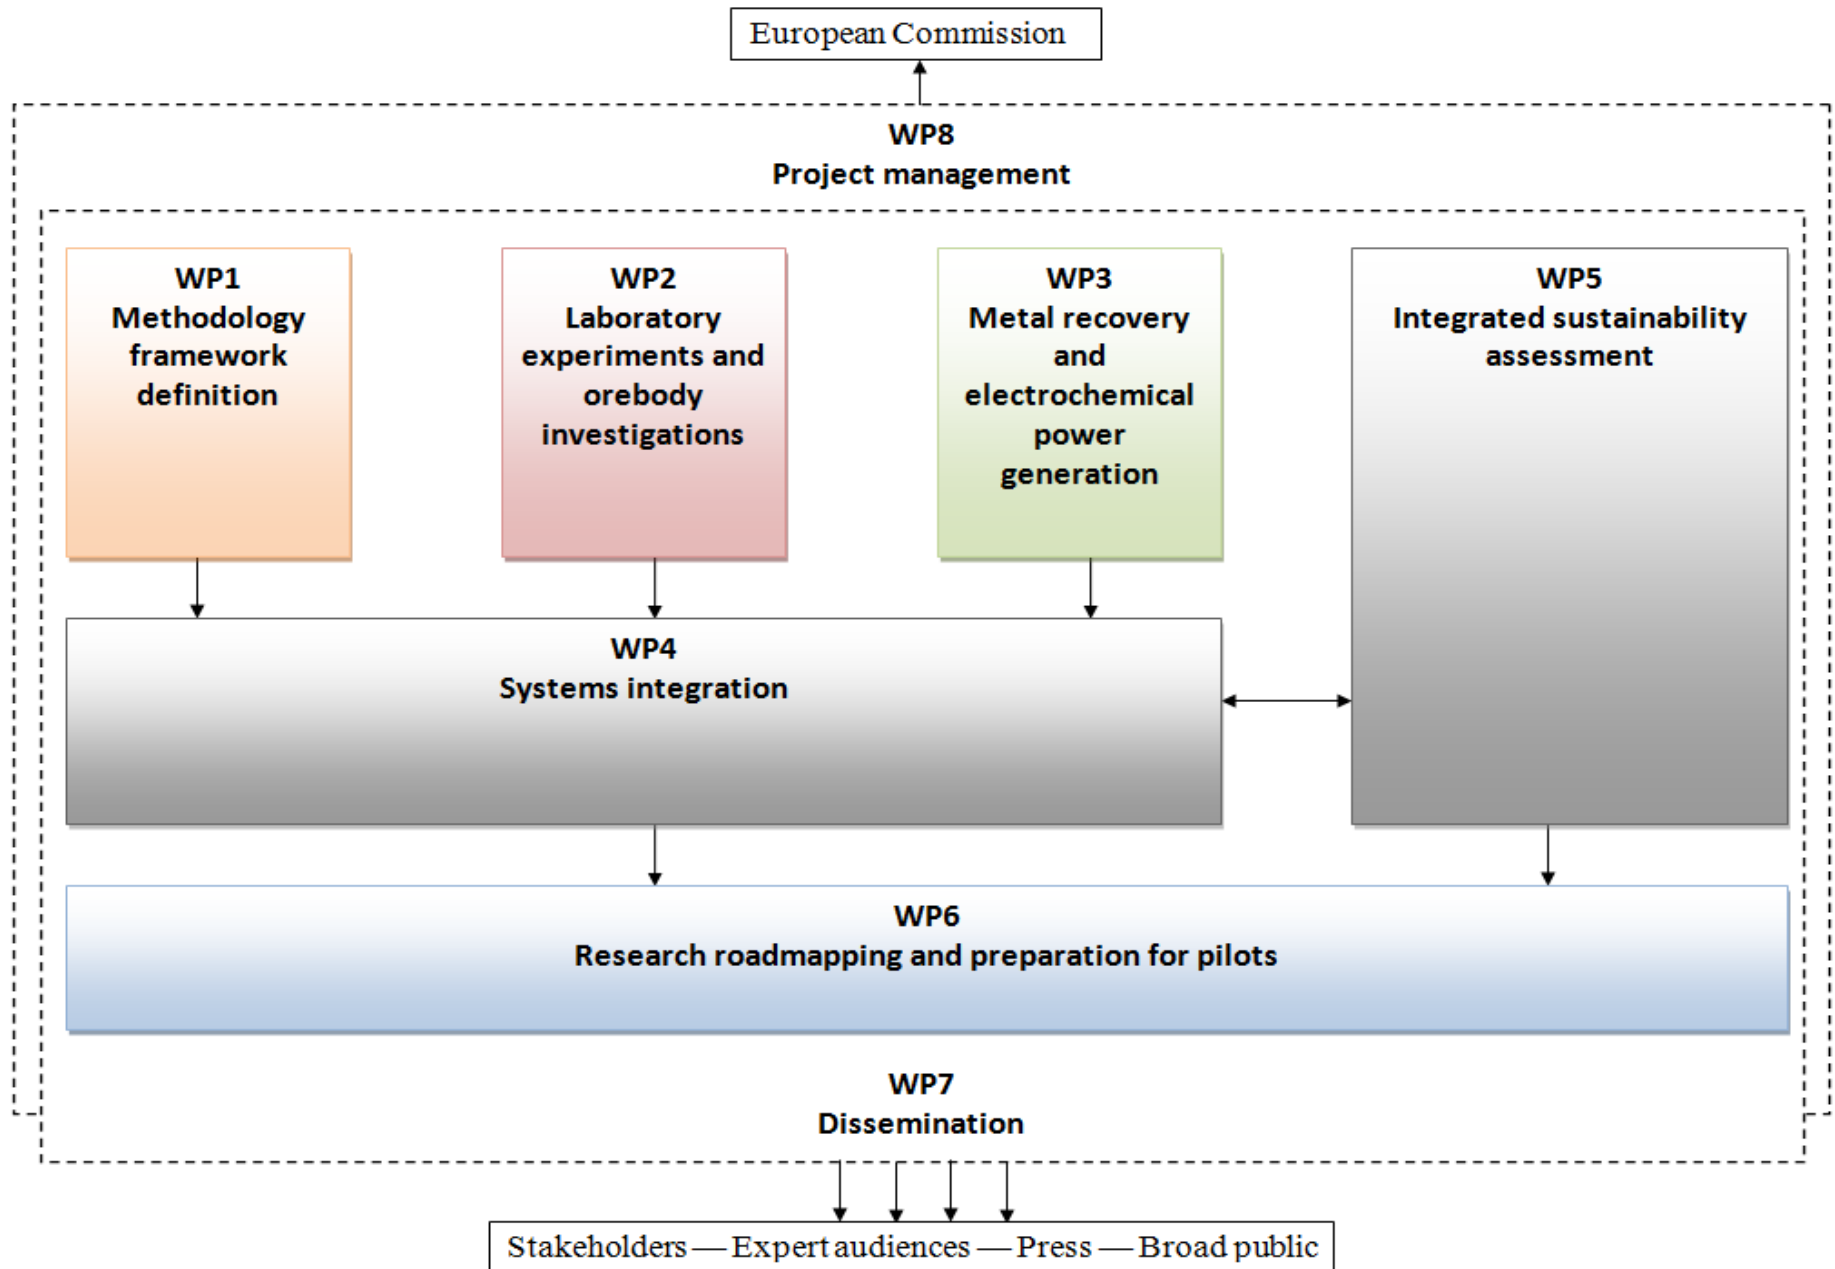

Metal extraction from the geothermal brine

Production of heat and electricity

Schematic overview of the envisioned CHPM Facility

# Work organisation

# WP1 - Methodology framework definition (UNIM)

EGS-relevant review of metallogenesis and ore deposit formation

Collection and evaluation of unprocessed data

Understanding the rock-mechanical characteristics of orebodies from an EGS perspective

# WP2 - Laboratory experiments and orebody investigations (BGS)

Laboratory experiments and simulations for orebody characteristics

Metal content mobilisation using mild leaching (pyrite oxidation exothermic!)

Metal content mobilisation with carbon nanoparticles

# WP3 - Metal recovery and electrochemical power generation (VITO)

Recovery of the metal content by high-temperature, high-pressure geothermal fluid electrolysis

Recovery of the metal content of geothermal fluids by gas-diffusion electroprecipitation and electrocrystallization

Salinity gradient power from pre-treated geothermal fluids – reverse electrodialysis

## WP4 – Systems integration (ISOR)

Conceptual framework for CHPM power plant

Process optimisation and simulations

CHPM schematics and blueprints

# WP5 - Integrated sustainability assessment (USZ)

Integrated sustainability assessment framework

Baseline economics for energy and mineral raw materials

Decision support for economic feasibility assessment

Social impact assessment and policy considerations

Environmental impact assessment

Ethics assessment

# WP6 - Roadmapping and preparation for pilots (LPRC)

Horizon Scanning & Visions (EU2050 Energy Roadmap, Geothermal Technology Roadmap)

Preparation for pilots (South West England , Iberian Pyrite Belt, Romania, Sweden, European outlook)

Roadmapping (2030, 2050)

# WP7 - Dissemination and stakeholder involvement (EFG)

Project website

Project image and stylebook

Communication and dissemination plan

Project brochures

Press-releases and media kits related to CHPM2030 initiatives and outcomes

Fact-sheets on the CHPM technology

# WP8 – Project management (UNIM)

Coordination and supervision of project activities

Administrative project management

Administrative project reporting

Organisation of project meetings

Risk management and conflict resolution

Technology exploitation, innovation management  
and IPR

CHPM2030 Kick off meeting, Miskolc Hungary, January 2016

On behalf of the CHPM2030 consortium  
thank you for your attention!
